30801 High-Content Silicone-Polyether Emulsion Defoamer

Grades: 30801 · Form: Silicone-polyether emulsion · Chemistry group: Silicone & Ether

1. Product description

A modified polydimethylsiloxane emulsion with 33% active content. Fast foam break, excellent dispersion and no oil-ring after dilution. A strong low-temperature workhorse.

2. Typical properties

Property	30801
Appearance	White emulsion
Active content	33.0±1.0
Viscosity (25 °C, mPa·s)	500-2500
pH	6.0-8.0
Ionic type	Non-ionic

Values in the table are typical and indicative. They describe the grade as normally supplied and are not a contractual specification; the values confirmed for your order are those stated on the order confirmation.

3. Typical applications

Water-based coatings · Adhesives · Textile · Industrial cleaning · Pulp and paper · Water treatment

4. Product characteristics

· Fast foam-breaking speed
· Excellent dispersion
· No creaming after dilution
· For use below 60 °C
· 33% active content

5. Addition and dilution

Typical addition is 0.05–0.5 % on the weight of the foaming system, established in your own trial at process temperature. Emulsion grades are normally diluted with water before addition and added continuously where the foam forms continuously. Diluted emulsions are used within the working shift; do not store them long term.

6. Packaging and storage

Supplied in the packing agreed for the order — drums, IBC totes or composite cartons for powder grades. Store in the closed original packing, out of direct sunlight, within 5–35 °C, and protect emulsions from freezing. Shelf life is stated on the product label; batches are traceable by lot number.

7. Safety and documentation

A model-specific GHS safety data sheet is issued on request for every model listed above; it is not reproduced here because classification follows the exact grade and the destination regulation. Handling guidance for the family: avoid eye and skin contact, use gloves and goggles, ensure ventilation, and do not discharge concentrates to drains.
